Underfloor heating

Provides heat evenly and efficiently throughout a room.

Running costs

Underfloor heating works well with lower flow heating systems.

Floor finishes

Underfloor heating can be used with all floor finishes. A carpet/underlay with a combined thermal resistance of < 2.5 tog is ideal for underfloor heating to operate efficiently.

Safety

There are no hot surfaces or hard edges with underfloor heating, providing a safe environment.

Interior design

With underfloor heating being concealed, there is freedom of design to configure furniture.

Maintenance

Underfloor heating requires minimal maintenance.

Life expectancy

Underfloor heating is expected to outlive the life of the building and comes with a 75 year warranty on the pipework.

Resell value

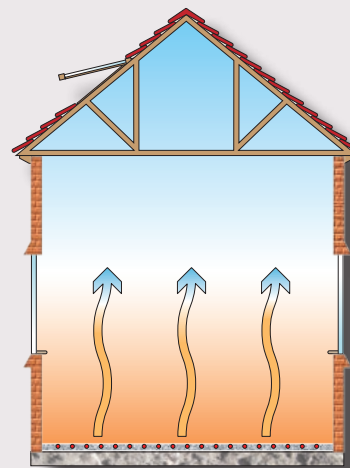

Underfloor heating is considered a valuable feature, thus estate agents will highlight it on the particulars of sale.

Running underfloor heating is like running a car

It uses more energy to go from 0-60mph, but then only the slightest touches on the accelerator to keep it running at that speed.

Thermal comfort

Underfloor heating uses radiant heat technology, like how the sun heats the earth — a gentle, natural way of heating.
